2 Consumer Price Index

Change Rate between August 2021 and September 2021

The year 2018 witnessed an increase in the consumer price index due to the application a 5% value-added tax on a wide range of goods and services, the average index increased from around 105 in 2017 to 109 in 2018.

As of the Fourth quarter of 2018, the index began to gradually decrease due to the decline in rental and fuel prices. The index decreased from 109 in 2018 to 107 in 2019 to reach 106.6 in 2020.

Technical Notes

Weights

Goods and services weights are considered as the main element in the production of the index number. They are calculated based on the Households' Income & Expenditures survey.

The UAE and the center has adopted the data of the 2014' Households' Income & Expenditures survey in calculating goods and services weights. Also, 2014 has been adopted as the base year for the consumer price index.

Taking into the account the disparities in the relative shares of the goods and services in the total expenditure of the household, the relative shares were calculated in details for each product then they were aggregated to come out with the final weights used in the index calculation. (figure 4).

4 Relative Weights of Major Groups of Expenditure

■ The method of calculating the consumer price index

The index is calculated based on the Laspeyres Equation. According to this formula the importance of each product is given by the quantities used in the base year. The cost of a group of commodities at current prices, is divided by the cost of the same group of commodities at base period prices. The general index calculation starts with the calculation of each product's index then it is aggregated to reach the group level, then the groups indices are aggregated until we reach the general index. The index is calculated by the average monthly price indices, for example, the annual price index is calculated by the average mean for 12 months.

■ Exhaustiveness & Coverage

The consumer price index covers all the consumption expenditures of the citizen and non-citizen families but it doesn't include loan installments, income tax, buying houses, and stocks, or any other financial assets.

The consumer basket of 2014 (base year) includes around 1200 goods and services, that were grouped in 12 groups as per the United Nations Classification of Individual Consumption by Purpose. Prices are collected from around 50 outlets in the emirate of Ras Al Khaimah. The frequency of price collection is related to the nature of the good or the service, for example, the prices of fruits and vegetables are collected weekly, but the prices of other food products and consumable goods, and oil prices are collected monthly. Rents, electronic devices, culture and recreation, and personal goods are collected quarterly. Education and health related prices are collected annually.

Main Tables

1 Consumer Price Index and Change Rate between September 2020 and September 2021
